

MASTERACK®

TAILOR FIT FOR A JOB DONE RIGHT

EV SOLUTIONS THAT **GO FURTHER.**

EVs come with a unique set of challenges for the work vehicle industry with factors like payload optimization and vehicle range top of mind for fleet managers. Let Masterack equip your fleet with lightweight and customized EV solutions that go further.

As sustainability requirements continue to be introduced and mandated across the country, more and more OEMs are adding electric and alternative fueled work vehicles to their lineup. Many fleets are starting to make the switch from traditional ICE vehicles. It is critical to work closely with your upfitter to design a tailor-fit solution to optimize payload and minimize range anxiety.

CUSTOM-DESIGNED TRADE PACKAGES

We design packages specific for each trade to optimize payload and increase vehicle range while giving your crew the storage they need.

LIGHTWEIGHT MATERIAL OPTIONS

High-quality aluminum and composite construction reduce total upfit weight by as much as 20% over steel.

DEDICATED ACCOUNT TEAM

Make the switch with confidence knowing our dedicated account team will find the best solution to maximize vehicle productivity.

Is your fleet EV ready? Let us design a package optimized for you.

TELECOM PACKAGE

FORD E-TRANSIT

1. **Composite partition.** Up to 40 lbs lighter than traditional steel, a composite partition is a must for EV vehicles to reduce payload.
2. **Aluminum shelving modules.** Our proven shelving module with custom-designed storage solutions made in robust aluminum construction for decreased weight, not quality.
3. **Heavy duty slide-out drawers.** Smooth gliding, locking slides make it easy to access your heaviest items.
4. **Tool finder.** Never leave your tools behind with RFID technology that alerts technicians when something is missing. Drawer can also be locked remotely to keep high-value items safe.
5. **Splicing table.** Give your crew plenty of room for cable splicing on the job with this fold-down table that stows securely when not in use.
6. **No-drill laminate composite floor.** Another EV essential, our no-drill laminate composite floor gets the job done without interfering with subfloor components.
7. **Enhanced lighting.** Increase operator productivity with a full lighting package to brighten up their workspace.
8. **Double UPLYFT ladder rack.** The industry's best-in-class. Our UPLYFT ladder rack features a low-profile with robust aluminum construction and a double slide-down, ergonomic design for ease of use.
9. **VX Control.** Digitally control vehicle systems with an integrated single-screen interface designed to help operators make smart decisions to improve performance.
